### 1. Assessment

## 2. Assessment

This result shows a score of 9,690 with 65% accuracy. The performance statistics indicate 20 questions, 13 correct responses and 7 incorrect responses, with an average time of 12 seconds per question.

### 3. Rank Evidence

### 4. Performance Summary

The assessment evidence demonstrates active participation in the Reinforcement Learning quizzes and shows measurable performance across multiple assessment attempts.

| Assessment        | Score  | Accuracy | Correct / Incorrect | Key Observation        |
|-------------------|--------|----------|---------------------|------------------------|
| CO2 AT3 Part 1    | 10,330 | 65%      | —                   | Completed successfully |
| CO2 AT3 Part 3    | 9,690  | 65%      | 13 / 7              | 20 questions attempted |
| General Knowledge | 13,290 | 89%      | 16 / 2              | Rank 8 / 27            |

### 5. Learning Outcome

The assessments provide practice in reinforcement learning concepts and help evaluate understanding through timed questions. The results also indicate areas where further revision can improve accuracy and consistency.

## 6. Conclusion

Guggilla Venkatasai successfully completed the recorded assessments. The evidence shows 65% accuracy in the two Reinforcement Learning assessment screenshots and an 89% accuracy result in the overall assessment screenshot. Continued practice of core Reinforcement Learning concepts such as Markov Decision Processes, rewards, policies, value functions, Q-learning and exploration–exploitation strategies can help improve future assessment performance.
